

Neubercart Birthdays Menu Item 1.00

tl;dr

The **Neubercart Birthdays Menu Item Module** (nc_birthdays_menu_item) creates a **Birthdays** menu item (under the top level **People** menu item) in the Drupal Administrative GUI where functionality related to Birthdays may be concentrated:

Purpose

Birthdays-related functionality is currently scattered throughout the Drupal system and some functionality is not necessarily accessible via the Administration toolbar. The purpose of the **Neubercart Birthdays Menu Item Module** (nc_birthdays_menu_item) is to augment the functionality of the Administration toolbar by creating a “gathering point” where all Birthday-related functionality may be concentrated for easier access. It provides a common anchoring point for existing and new Birthdays-related modules to be affixed.

Requirements

None. This module works with the stock Toolbar that ships with Drupal.

Benefits

This module provides a common, fixed, thematic point in the toolbar where Birthdays-related functionality may be identified, explored, configured and accessed.
